Everyone starting work in this field is faced with the lack of basic books. Here, two renowned researchers introduce the reader to luminescence and its applications, describing the principles of the luminescence processes in a clear way and dealing not only with physics, but also with the chemistry of systems. Particular attention is paid to materials such as lamp phosphors, cathode-ray and X-ray phosphors, scintillators and many other applications.

Quoting God charts the many ways in which media report religion news, how media use the quoted word to describe lived faith, and how media itself influence - and are influenced by - religious discourse and behavior in the public square. The volume intentionally brings together the work of academics, who study religion as a crucial factor in the construction of identity, and the work of professional journalists, who regularly report on religion in an age of instant and competitive news. This book clearly demonstrates that the relationship between media culture and spiritual culture is foundational and multi-directional; that the relationship between news values and religion in political life is influential; and that the relationship among modernity, belief, and journalism is pivotal.

Considers the important aspects of life during the Han period, when the foundations were laid for the chief political, economic, cultural and social structures that would characterise imperial China.

What Girls Say About Their Science Education Experiences describes the science education experiences of 12 young ladies enrolled in advanced science courses in a Southeast Texas High School. What Girls Say... includes profiles of each girl and topical chapters dealing with generalizations about the key elements of experience that the girls illuminated. Also, a detailed review of the current literature related to girls and science is provided. The strength of the text lies in the use of the participants. words to describe their own experiences. Unfortunately, despite over 30 years of research related to gender and science education, females still are underrepresented in some upper-level high school science courses, particular college science curricula and majors, and many scientific careers. While boys and girls enter school with equal ability, girls are marginalized in science and math to the point that they trail males in science interest and participation by graduation time. However, such differences have decreased. While attitudes, achievement levels, and the other components of "the science education experience" have been quantitatively examined, very little qualitative analysis exists to describe the educational experience of females in American high school classrooms from the perspective of the student. A description of this phenomenon as constructed through the experiences of female students represents a worthy pursuit. This book represents an attempt to describe this phenomenon as constructed through the experiences of female students. Very simply, the purpose of this book was to describe the essential elements of the current science education experience as constructed by female physics and advanced chemistry students. The construct of science education experience for females included perceived (a) affective attitudes, (b) achievement and success, (c) ability, (d) cultural factors, (e) social-psychological factors, (f) interpersonal factors, and (g) instructional/teacher factors. All of these topics are addressed in What Girls Say About Their Science Education Experiences.

#1 NEW YORK TIMES, WALL STREET JOURNAL, AND BOSTON GLOBE BESTSELLER • One of the most acclaimed books of our time: an unforgettable memoir about a young woman who, kept out of school, leaves her survivalist family and goes on to earn a PhD from Cambridge University " An amazing story, and truly inspiring. It ' s even better than you ' ve heard. " —Bill Gates NAMED ONE OF THE TEN BEST BOOKS OF THE YEAR BY THE NEW YORK TIMES BOOK REVIEW • ONE OF PRESIDENT BARACK OBAMA ' S FAVORITE BOOKS OF THE YEAR • BILL GATES ' S HOLIDAY READING LIST • FINALIST: National Book Critics Circle ' s Award In Autobiography and John Leonard Prize For Best First Book • PEN/Jean Stein Book Award • Los Angeles Times Book Prize Born to survivalists in the mountains of Idaho, Tara Westover was seventeen the first time she set foot in a classroom. Her family was so isolated from mainstream society that there was no one to ensure the children received an education, and no one to intervene when one of Tara ' s older brothers became violent. When another brother got himself into college, Tara decided to try a new kind of life. Her quest for knowledge transformed her, taking her over oceans and across continents, to Harvard and to Cambridge University. Only then would she wonder if she ' d traveled too far, if there was still a way home. " Beautiful and propulsive . . . Despite the singularity of [Westover ' s] childhood, the questions her book poses are universal: How much of ourselves should we give to those we love? And how much must we betray them to grow up?
