Nonprofit organizations by their very nature are risk-taking operations. They venture to provide services to people at risk, in risky places and on limited budgets. To tell a nonprofit organization not to take risks is as good as telling the organization to close its doors. This book explains how to take risks in enlightened ways that enable your nonprofit to fulfill its mission to the utmost in our less-than-fully-predictable world. This book is also about risk management'a process for planning, organizing, directing and controlling the assets and activities of any organization to enable it to accomplish its mission. But to the traditional concept of 'safeguarding against the losses,' we have added strategies for 'seizing the opportunities for gain that risk generates?'a rather avant-garde concept. When you add safeguarding loss to seizing opportunity for gain, you have a nonprofit poised to grow into its future.

This companion piece to "Enlightened Risk Taking: A Guide to Strategic Risk Management for Nonprofits" is essential if you are serious about launching a risk management program to safeguard against losses while seizing the opportunities for gain. The Workbook contains sample forms and checklists that will help you formulate a risk management program from scratch or expand a current program to incorporate recognizing and taking advantage of opportunities for gain. Enlightened Risk Taking: A Guide to Strategic Risk ...

Strategy, risk management and project management are often considered separately by those applying their principles—but at their most effective, all are dependent upon each other for success. Enlightened Planning teaches this holistic perspective and demonstrates how a synthesis of these approaches yields far greater opportunities. A strategic, calculated risk, for example, can be less inherently risky than chronic risk aversion over time. Here, a respected specialist and teacher demonstrates how to become an 'enlightened planner', one that is aware of project, strategy and risk concerns, and their potential interplay. Following the core principle of Keep It Simple Systematically, he shows how organised, systematic thought processes can demystify the complexities of decision-making when considering a huge variety of concerns at once. Supported throughout with real-life cases from the author 's considerable experiences with commercial organisations, it is also supported by a website containing even more cases, learning and teaching materials. This book is essential reading for any practitioner specialising in risk management, project management or strategy, as well as those teachers or participants in executive programmes.

Climate change is one of the biggest challenges for mankind. Although there is increasing evidence that climate change is already occurring, there is neither sufficient knowledge as to what extent climate change poses risks to societies and companies, nor about adequate strategies to cope with these risks. Bringing together an international group of scholars from environmental economics, political science and business, this book describes, analyses and evaluates climate change risks and responses of societies and companies. The book contributes to the question of how climate change can be mitigated by discussing efficient and effective design of mitigation measures, in particular emissions trading and clean development mechanism (CDM). Placing special emphasis on the impact of climate change risks on business, the book investigates in which way selected sectors of the economy are affected and what measures they can undertake to adapt to climate change risks.

This book is a collection of the best seventeen papers from the first Management Theory Conference held at the University of the Pacific in San Francisco, California, on September 27 and 28, 2013. The authors of these papers are some of the best management researchers in the world, including: Anette Mikes, Robert S. Kaplan, and Amy C. Edmondson (Harvard Business School); Sarah Harvey (University College London); Randall S. Peterson (London Business School); Jack A. Goncalo and Verena Krause (Cornell University); Karen A. Jehn (University of Melbourne); Yally Avrahampour (London School of Economics and Political Science); Tammy L. Madsen (Santa Clara University); and Sim B. Sitkin (Duke University). All of the papers in this book present the latest theoretical developments that were discussed at the first Management Theory Conference. The purpose of the conference was to help address the shortage of new management and organization theories. The mission of the conference was to facilitate, recognize, and reward the creation of new theories that advance our understanding of management and organizations. The conference was held to motivate management researchers to create new theories and to provide researchers with a supportive forum where those new theories could be presented, discussed, and published. Chapter Seventeen is the winner of the Wiley Outstanding New Management Theory Award. Authors Chris P. Long, Sim B. Sitkin, and Laura B. Cardinal present a theory to explain the drivers of managerial efforts to promote trust, fairness, and control. They theorize how superior-subordinate conflicts stimulate managers ' concerns about managerial legitimacy and subordinate dependability in performing tasks, and hypothesize how managers attempt to address these concerns using trustworthiness-promotion, fairness-promotion, and control activities. This book also contains written summaries of the two keynote addresses that were given at the conference by Roy Suddaby (editor of Academy of Management Review) and Jeffrey Pfeffer (Stanford University), which comprise Chapters Eighteen and Nineteen. Professors Suddaby and Pfeffer present a fascinating debate of the future and new directions of management and organization theories.

Timely and accessible content on the traditional project management activities of control, risk, time and cost, and quality and value The Wiley Guides to the Management of Projects address critical, need-to-know information that will help professionals successfully manage projects in most businesses and help students learn the best practices of the industry. They contain not only well-known and widely used basic project management practices but also the newest and most cutting-edge concepts in the broader theory and practice of managing projects. This second book in the series explains the "traditional" project management activities of control, risk, time, cost, and quality. The expert contributors show that project control represents more than the simple evaluation of project performance. They detail the principles of project time and cost control and offer a detailed review of critical chain project management. In addition, they provide a framework for project performance measurement, show how to make risk management more effective, and tell how to improve quality management. Touching on all of the fundamental levers of project control, this book will prove to be a comprehensive "owner's manual" for project and team managers, project team members, engineers, business consultants, and all those involved in any aspect of project management. "THE ENLIGHTENED GAMBLER, The Heart and Spirit of the Risk Taker in All of us" guides the reader through the author's world of gambling, seduced by the never ending excitement in the "land of uncertainty." The book encourages readers to step past the superficial and take a more conscious view of the motivating drive in all of us to take risks. In a lighthearted, sometimes laugh-out-loud, self deprecating style, the author playfully and willingly exposes his own vulnerability to the seductive lure of gambling, but then points out ways to encourage winning attitudes, which he has developed over the years, while defusing old, toxic, loser mentality. You can find my blog at www.theenlightenedgambler.com. "I wrote this book, first of all, to point out that everybody gambles, but most people don't call what they do gambling. Some of the risks we take in life work out and some don't. Right? Well guess what? I call those risks gambles. I also wrote this book to help you laugh out loud about all the dumb moves I made as a gambler, and maybe, just maybe, after laughing out loud at MY screw-ups, you'll sit back and take a look at your own. I say, if you want to play, you have to pay. One way or another. You either lose your stubborn defiance or you lose your shirt. So which one ya gonna choose?"
