The series Beihefte zur Zeitschrift für die neutestamentliche Wissenschaft (BZNW) is one of the oldest and most highly regarded international scholarly book series in the field of New Testament studies. Since 1923 it has been a forum for seminal works focusing on Early Christianity and related fields. The series is grounded in a historical-critical approach and also explores new methodological approaches that advance our understanding of the New Testament and its world.

The origins of satyr drama, and particularly the reliability of the account in Aristotle, remains contested, and several of this volume's contributions try to make sense of the early relationship of satyr drama to dithyramb and attempt to place satyr drama in the pre-Classical performance space and traditions. What is not contested is the relationship of satyr drama to tragedy as a required cap to the Attic trilogy. Here, however, how Aeschylus, Sophocles, and Euripides (to whom one complete play and the preponderance of the surviving fragments

belong) envisioned the relationship of satyr drama to tragedy in plot, structure, setting, stage action and language is a complex subject tackled by several contributors. The playful satyr chorus and the drunken senility of Silenos have always suggested some links to comedy and later to Atellan farce and phylax. Those links are best examined through language, passages in later Greek and Roman writers, and in art. The purpose of this volume is probe as many themes and connections of satyr drama with other literary genres, as well as other art forms, putting satyr drama on stage from the sixth century BC through the second century AD. The editors and contributors suggest solutions to some of the controversies, but the volume shows as much that the field of study is vibrant and deserves fuller attention.

This clear-thinking collection brings together 25 of Daly s essays, speeches, reviews and testimonials from the past decade. . . as a whole they provide a useful masterclass on the principles of ecological economics. Daly s vision, as well as his frustration with mainstream economists refusal to engage with his arguments, comes through loud and clear. New Scientist It s hard to imagine ecological economics without the numerous and profound contributions of Herman Daly. These papers reveal the consistency of his analysis and clarity of exposition that have made him one of the most influential economists of his generation. Because of Herman Daly we have a much better understanding of how economies relate to the environment, why so much is wrong with this relationship and what must be done to fix it. Peter Victor, York University, Canada This thrilling compilation outlines the origins of the young discipline of ecological economics by the intellectual leader of the movement, Herman Daly. He recounts how, as a member of the recently demoted environment department at the World Bank, he integrated ecology with economics during his six years in the bowels of the beast. Herman lucidly and compellingly combines common sense with profound understanding of both economics and ecology to arrive at sustainable solutions to the global problematique. Herman s rigorous yet compassionate solutions to climate change, peak oil, globalization vs. internationalization, poverty reduction, and the unsung concept of scale leading to uneconomic growth, are precisely what we need to prevent the current liquidation of our beautiful world. This book will galvanize you into the action we need so much. Robert Goodland, Environmental adviser, World Bank Group, 1978 2001 In this book, written in crystal clear style, Herman Daly reiterates the main points of his analysis and vision, he praises some teachers (John Ruskin, Frederick Soddy, Nicholas Georgescu-Roegen, Kenneth Boulding), he fearlessly attacks some adversaries in the World Bank and MIT, and he offers some advice to the government of his own country, to the Russian Duma, and especially to OPEC that, if followed, would change the world very much for the better. Finally, on a different line of thought, he interrogates conservation biologists on their reasons for wanting to keep biodiversity since, as biologists, they claim that evolution has no particular purpose. Why not let the Sixth Great Extinction run its course? In other words, science cannot provide an ethics of conservation, which Herman Daly finds in religion more than in democratization deliberations. Joan Martinez-Alier, Universitat Autònoma de Barcelona, Spain Ecological Economics and Sustainable Development comprises a carefully chosen selection of some 25 articles, speeches, congressional testimonies, reviews, and critiques from the last ten years of Herman Daly s ever-illuminating work. This book seeks to identify the blind spots and errors in standard growth economics, alongside the corrections that ecological economics offers to better guide us toward a sustainable economy one with deeper biophysical and ethical roots. Under the general heading of sustainability and ecological economics, many specific topics are here brought into relation with each other. These include: limits to growth; full-world versus empty-world economics; uneconomic growth; definitions of sustainability; peak oil; steady-state economics; allocation versus distribution versus scale issues; non-enclosure of rival goods and enclosure of non-rival goods; production functions and the laws of thermodynamics; OPEC and Kyoto; involuntary resettlement and development; resource versus value-

added taxation; globalization versus internationalization; immigration; climate change; and the philosophical presuppositions of policy, including the policies suggested in connection with the topics above. This fascinating work will appeal to scholars and academics of ecol

The emergence of civil aviation as a means of mass transportation is primarily due to the large scale construction of jet airplanes in the past 30 years or so. A large number of these jet airplanes is currently operating at or beyond their designed fatigue lives. Thus, the structural integrity of these aging airplanes has become an issue of major concern to all nations of the world. To bring the needed technical and research focus on the issues involved in the life-enhancement and safety-assurance of aging airplanes, the Federal Aviation Administration sponsored a symposium in Atlanta, GA, USA, during 20-22 March 1990. This symposium, under the title "International Symposium on Structural Integrity of Aging Airplanes" was organized jointly by the Georgia Institute of Technology (Center for Computational Mechanics) and the Transportation Systems Center (Cambridge, MA) of the U.S. Department of Transportation. Industrial and academic experts from several countries in North America, Europe and Asia, were invited to discuss their experiences and proposed solutions. This monograph contains the original papers that represent the expanded and edited versions of the talks presented at this symposium. This book aims to bring the collective experience, from across the world, with problems related to the structural integrity of aging airplanes to the attention of the professional and research community at large - in the hope that it may stimulate further fruitful research on this important topic of global concern.
