species, and from small-scale coastal to offshore industrial fisheries. For example, coastal fisheries management is more community-based, and local people have the authority and take priority in the decision-making process. In contrast, offshore fisheries are more industrialized and commercially oriented, and the national government plays a major role in their management. One of the main challenges in world fisheries is to implement the ecosystem approach, but there is no one-size-fits-all solution for its implementation. The second half of this book considers

measures to bridge the gaps between fisheries management and ecosystem-based management. As a case study, management measures in the Shiretoko World Natural Heritage area are analyzed. In closing, the Grand Plan of Japanese fisheries policy for the next 20 years and three future scenarios are presented.

Management of fisheries encompasses inter-action between societal customs, fugitive resources and

littoral zones and licensing systems where management regulations restrict the number and size of fishing vessels. Biological considerations are discussed and the coordination mechanisms required are described for blending resource characteristics with Japanese societal customs. An appraisal is given of the management measures adopted.

This book explores how we can solve the urgent problem of optimizing the use of variable, uncertain but finite fisheries resources while maintaining sustainability from a marine-ecosystem conservation perspective. It offers readers a broad understanding of the current methods and theory for sustainable exploitation of fisheries resources, and introduces recent findings and technological developments. The book is divided into three parts: Part I discusses fish stock dynamics, and illustrates

Independent data. It also describes acoustic surveys and biological sampling, as well as stock assessment methods. Part III examines management models for effectively assessing the natural variability in fisheries resources. The authors explore ways of determining the allowable catch in response to changes in stock abundance and how to incorporate ecological processes and monitoring procedures into management models. This book offers readers a broad understanding of sustainable exploitation as well as insights into fisheries management for the next

Few nations rely upon the ocean as much as Japan for livelihood, culture and transport. The seas have long played a vital role for the Japanese, helping to support the economic and social life of a nation that possesses few resources and little arable land, and sustain a population that has nearly tripled in the last century. Fish are a distinctive feature of the Japanese diet, constituting nearly half of all animal protein consumed - the highest rate in the world. The industry itself has provided an impetus for

coastal community growth and national economic development over the past century, while fisheries have worked their way into Japanese culture and customs, serving as a dominant symbol in traditional arts and folklore. This book explores the overarching rationale that motivated Japanese international fisheries policy throughout the post-war period until today, highlighting the importance of international fisheries to Japan and the stature this resource has occupied as a national interest. It provides a comparative view of Japanese foreign policy

at various ocean conferences, treaty negotiations, bilateral diplomatic initiatives and other maritime relations that constitute ocean policy over half a century, and investigates the domestic constituents of national policy. Roger Smith argues that the rationale for international fisheries policy may be best viewed as deriving from Japan's unique defence strategy for its national interests: comprehensive security. Encompassing non-military elements and most importantly defence of economic interests, Japan's international fisheries

Taking a broad view of Japan's international fisheries policies from 1945 to the present, this book highlights the key trends in policy motives and means throughout the post-war period. As such, it will be of great interest to students and scholars of Japanese studies, international and environmental law, resource management and international relations, as well as to policy makers working in the field.

In anticipation of the UN Conference of the Law of the Sea taking place in 1973, Dr Kasahara and Dr Burke of the University of Washington first published North Pacific Fisheries Management earlier that year. The conference brought fishery territories to a global stage with delegates that may not be as informed about ocean issues as those previously making decisions. Therefore the Program of International Studies of Fishery Arrangements was created to explore the management of fisheries in
