For the first time in human history more people live in cities than in the countryside and greater numbers suffer from obesity than from hunger. Emerging economies now represent half of the global economy and during the next few decades India will be the biggest country in terms of population, China the largest in output and the United States the richest among the major economies on a per capita income basis. Food and water shortages will likely become humankind's most important challenge. In this accessible introduction, Mauro Guill é n and Emilio Ontiveros deploy the tools of economics, sociology and political science to provide an analytical perspective on both the problems and opportunities facing business in the modern world.

Days of Decision spans a century of American foreign policymaking, from the Spanish- American War of 1898 to the attacks of September 11, 2001. Michael J. Nojeim and David P. Kilroy carefully examine twelve foreign-policy landmarks, each of which played a crucial role in shaping world history and led to profound changes in U.S. foreign policy. Devoting one chapter to each turning point, they place it in its proper historical context, explore its political consequences--primarily the debates and divisions that arose among policymakers--and discuss the aftermath, focusing on its lasting influence on world affairs and the conduct of American diplomacy and foreign affairs. This accessible, introductory text provides students of foreign policy and international relations a deeper understanding of these disciplines' processes and of America's place in the world.

deeper and more abstract level of analysis. It addresses the conceptual issue of what distinguishes turning points from life transitions in general and raises crucial questions about the application of turning points as a biographical research method. Biography and turning points in Europe and America is all the more distinctive and significant due to its broad empirical database. The anthology includes authors from ten different countries, providing a number of contexts for thinking about how turning points relate to constructions of meaning shaped by globalization and by cultural and structural meanings unique to each country. The book will be useful across a wide range of social sciences and particularly valuable for researchers needing a stronger theoretical base for biographical work.

Artificial Intelligence is here, today. How can society make the best use of it? Until recently, “ artificial intelligence ” sounded like something out of science fiction. But the technology of artificial intelligence, AI, is becoming increasingly common, from self-driving cars to e-commerce algorithms that seem to know what you want to buy before you do. Throughout the economy and many aspects of daily life, artificial intelligence has become the transformative technology of our time. Despite its current and potential benefits, AI is little understood by the larger public and widely feared. The rapid growth of artificial intelligence has given rise to concerns that hidden technology will create a dystopian world of increased income inequality, a total lack of privacy, and perhaps a broad threat to humanity itself. In their compelling and readable book, two experts at Brookings discuss both the opportunities and risks posed by artificial intelligence—and how near-term policy decisions could determine whether the technology leads to utopia or dystopia. Drawing on in-depth studies of major uses of AI, the authors detail how the technology actually works. They outline a policy and governance blueprint for gaining the benefits of artificial intelligence while minimizing its potential downsides. The book offers major recommendations for actions that governments, businesses, and individuals can take to promote trustworthy and responsible artificial intelligence. Their recommendations include: creation of ethical principles, strengthening government oversight, defining corporate culpability, establishment of advisory boards at federal agencies, using third-party audits to reduce biases inherent in algorithms, tightening personal privacy requirements, using insurance to mitigate exposure to AI risks, broadening decision-making about AI uses and procedures, penalizing malicious uses of new technologies, and taking pro-active steps to address how artificial intelligence affects the workforce. Turning Point is essential reading for anyone concerned about how artificial intelligence works and what can be done to ensure its benefits outweigh its harm.

In this remarkable book, Professor Diego De Leo, distinguished Italian psychiatrist and world leading researcher into suicide prevention, takes us on a revealing journey into the suicidal mind. Told in the form of letters, twelve life stories disclose much about the human spirit, as well as the deep complexities of suicidal behaviour and the struggle for science to understand - in the words of the author - "the worst of all human tragedies". Diego adds his own honest interpretations and comments as a roadmap to guide the reader on the many messages these stories entail.

Using primary and secondary sources, Wilma Henrickson assembles a collection of documents related to decisive moments in the history of Detroit and the region, spanning the time from before statehood to the present. These were turning points for the region—life for the residents took a new direction, definitely closing off some options while accepting others. Some were brought about by accident; others were made by conscious decision. The consequences of some decisions were immediate, others appeared only after the accumulation of years. Among Henrickson's recurring themes are the
