This book constitutes the refereed conference proceedings of the 10th International Conference on Multi-disciplinary Trends in Artificial Intelligence, MINTAI 2016, held in Chiang Mai, Thailand, in December 2016. The 22 revised full papers presented together with 5 short papers and 2 abstracts of invited talks were carefully reviewed and selected from 50 submissions. The workshop solicits papers from all areas of AI including cognitive science; computational intelligence; computational philosophy; game theory; machine learning; multi-agent systems; natural language; representation and reasoning; speech; vision and the web; as well as applications of AI in big data; bioinformatics; biometrics; decision support; e-commerce; image processing; analysis and retrieval; industrial applications; knowledge management; privacy; recommender systems; security; software engineering; spam filtering; surveillance; telecommunications; and web services.

For decades now tattoos have been potent symbols of the Los Angeles gang-life scene. The black and white tattoos with recognizable gang symbols appear on members' faces, necks and all over their bodies, making their gang affiliation immediately clear to whomever crosses their path. This can mean the difference between life and death on the streets, and just as often, in prison. What does this prominently placed imagery mean for those men and women who somehow extricate themselves from gang life or are released from prison or want to separate themselves from the gang and start life anew? The very tattoos which may have helped guard against the constant threat of rival gangs now bar many ex-gang members from employment, life without harassment, and the freedom to move on from a past they have worked hard to overcome. Skin Deep is a photography project that seeks to show the effects of this ongoing gang conflict in Los Angeles. Photographer Steven Burton set out to photograph realistic portraits of former gang members who are trying to escape the revolving door of death and prison. For these men and women, the aftermath of gang life is not only carried within--it is also scrawled across their faces and bodies. Skin Deep uniquely highlights the impact tattoos have on the way a person is perceived by showing what each participant might look like without them. Utilizing before and, thanks to the advantages of Photoshop, after photographs, these men and women got a chance to see what they'd look like without the inked visual armor. After the bare images were presented to each, they were asked to talk about themselves and their families, what tattoos represent to them, and their aspirations for the future. Seeing themselves without tattoos--many for the first time in decades--naturally brought about a wide range of emotions, recollections, hopes, and dreams, with responses such as: "I am shocked. I don't know what to say about this. I am going to give this to my mom, she is going to be so happy." "I think this guy in the pictures would judge the one with tattoos right off the top." "That's crazy, that looks real crazy. Those came out cool man! I think I like it better without the tattoos." Burton met his subjects thanks to Father Greg Boyle, the founder of Homeboy Industries in LA, and the entire project is inspired by his tireless work to help rehabilitate these former gang members and give them all a crucial second chance in life. Skin Deep offers a chance to expose the realities these individuals face when trying to rebuild their lives and re-enter society. As importantly, for the public, the project provokes consideration regarding how society perceives and judges people with tattoos and violent pasts and seeks to garner empathy for those caught in the crosshairs of gang life as they try to change their futures.

Listing over 10,000 entries, Harrod's Librarians' Glossary and Reference Book spans everything from traditional printing terms to search engines and from book formats to URLs. Revisions for this tenth edition have centred in particular on the Information Society and its ramifications, on the general shift towards electronic resources, and on e-commerce, e-learning and e-government, whilst at the same time maintaining key areas predating the IT revolution. Web terminology, URLs and IT terms have been checked and updated, and coverage of terms relating to digitization and digital resources, portals, multimedia and electronic products has been revised or expanded as necessary. Harrod's Glossary now includes Knowledge Management terms, and this edition has also focused on developments in the field of intellectual property, copyright, patents, privacy and piracy. It gives wide international coverage of names, addresses and URLs of major libraries and other important organizations in the information sector, of professional associations, fellowships, networks, government bodies, projects and programmes, consortia and institutions, influential reports and other key publications. Entries are included on classification and file coding, on records management and archiving and on both the latest and the most enduring aspects of library and information skills. Even with the Web at your fingertips Harrod's Librarians' Glossary and Reference Book remains a quicker reference for explaining specialist terms, jargon and acronyms, and for finding the URLs you need, whether you are working in a print-based or digital library, in archiving, records management, conservation, bookselling or publishing.

SGI's X Windows graphics expert explains how to construct real and useful 3D applications using OpenGL and X, and how to tightly integrate OpenGL applications with the X Window System. Using the OpenGL Utility Toolkit (GLUT) to show how OpenGL programs can be quickly constructed, the book explores OpenGL features using examples written in GLUT.
