Although diversity is a twentieth-century term, as the United States continues through the twenty-first century, the issue of diversity in society and in organizations is becoming more complex. Managing Diversity in the Military addresses current equal opportunity and diversity issues and explores how the military is attempting to resolve them. The research presented reflects interests of scholars from various backgrounds who use different models, approaches, and methodologies, many of which are adapted from the study of civilian institutions. The work is divided into five sections: "Contemporary Approaches to Managing Diversity," "Diversifying Leadership: Equity in Evaluation and Promotion," "Gender Integration and Sexual Harassment," "Military Discipline and Race," and "Where Do We Go from Here?" which proposes future research directions for equal opportunity and diversity management in the armed forces. All of the areas explored in this accessibly written volume have counterparts in the civilian sector. The book offers insights, practical methodologies, and effective management guidelines for commanders, civilian-sector executives, and human resource practitioners responsible for equal opportunity programs and outcomes. This is now the standard social research tool in an area of profound practical concerns.

The New York Times Bestselling guide for managers and executives. Introducing the new, realistic loyalty pact between employer and employee. The employer-employee relationship is broken, and managers face a seemingly impossible dilemma: the old model of guaranteed long-term employment no longer works in a business environment defined by continuous change, but neither does a system in which every employee acts like a free agent. The solution? Stop thinking of employees as either family or as free agents. Think of them

instead as allies. As a manager you want your employees to help transform the company for the future. And your employees want the company to help transform their careers for the long term. But this win-win scenario will happen only if both sides trust each other enough to commit to mutual investment and mutual benefit. Sadly, trust in the business world is hovering at an all-time low. We can rebuild that lost trust with straight talk that recognizes the realities of the modern economy. So, paradoxically, the alliance begins with managers acknowledging that great employees might leave the company, and with employees being honest about their own career aspirations. By putting this new alliance at the heart of your talent management strategy, you ' ll not only bring back trust, you ' ll be able to recruit and retain the entrepreneurial individuals you need to adapt to a fast-changing world. These individuals, flexible, creative, and with a bias toward action, thrive when they ' re on a specific " tour of duty " —when they have a mission that ' s mutually beneficial to employee and company that can be completed in a realistic period of time. Coauthored by the founder of LinkedIn, this bold but practical guide for managers and executives will give you the tools you need to recruit, manage, and retain the kind of employees who will make your company thrive in today ' s world of constant innovation and fast-paced change.

Welcome to the third International Conference on Management of Multimedia Networks and Services (MMNS'2000) in Fortaleza (Brazil)! The first MMNS was held in Montreal (Canada) in July 1997 and the second MMNS was held in Versailles (France) in November 1998. The MMNS conference takes place every year and a half and is aimed to be a truly international event by bringing together researchers and practitioners from all around the world and by organising the conference each time in a different continent/country. Over the past several years, there has been a considerable amount of research within the fields of multimedia networking and network management. Much of that work has taken place within the context of managing Quality-of Service in broadband integrated services digital networks such as the A TM, and more recently in IP-based networks, to respond to the requirements of emerging multimedia applications. A TM networks were designed to support multimedia traffic with diverse characteristics and can be used as the transfer mode for both wired and wireless networks. A new set of Internet protocols is being developed to provide better quality of service, which is a prerequisite for supporting multimedia applications. Multimedia applications have a different set of requirements, which impacts the design of the underlying communication network as well as its management. Several QoS management mechanisms intervening at different layers of the communication network are required including QoS-routing, QoS-based transport, QoS negotiation, QoS adaptation, FCAPS management, and mobility management.
