~~Numerical methods for solving the heat equation, the wave ...~~

In its simplest form, the wave equation refers to a scalar function  $u$

# Online Library

## Numerical

$u = u(r, t), r \in \mathbb{R}^n$  that satisfies:

$$\nabla^2 u - \frac{1}{c^2} \frac{\partial^2 u}{\partial t^2} = 0. \quad (4.1)$$

Here  $\nabla^2$  denotes the Laplacian in  $\mathbb{R}^n$  and  $c$  is a constant speed of the wave propagation.

An even more compact form of Eq. (4.1) is given by  $u = 0$ , where

$\square = \nabla^2 - \frac{1}{c^2} \frac{\partial^2}{\partial t^2}$  is the d'Alembertian.
