Amazon.com: nursing concept map: Books

Concept mapping and mind mapping have been used in science education since the 1970s. Nursing students in undergraduate and graduate classes are frequently asked to create concept maps or mind maps around a central concept or idea. These assignments may be used for individual or group projects and as a starting point for graduate student research.

What is Concept Mapping and Mind Mapping? - Nursing ...

Get this from a library! Nursing concept care maps for providing safe patient care. [Ruth A Wittmann-Price; et al] -- Master care planning with concept maps!

Master care planning with concept maps! A concept map is an easy-to-construct, visual tool that helps you organize your assessment data, identify patient problems, determine the appropriate nursing diagnoses and interventions, and assess the outcomes. Nursing Concept Care Maps for Providing Safe Patient Care presents 200 sample care maps covering the diseases and disorders you'll encounter most often in clinical practice. They'll also help you develop the critical-thinking skills you need to plan safe and effective nursing care. You'll immediately see the relationship between the patient's problem, the underlying condition and your clinical response. You'll also see the relationships between medical and nursing diagnoses, history and physical assessment data, treatments, medications and laboratory data.

Nursing Concept Care Maps for Providing Safe Patient Care presents 200 sample care maps covering the diseases and disorders you'll encounter most often in clinical practice. They'll also help you develop the critical-thinking skills you need to plan safe and effective nursing care.

This unique, easy-to-use program walks you through each step involved in gathering, organizing, and entering patient data into a plan of care. Its flexible design and interactive approach make it a fun and effective way to learn concept mapping techniques while you build "real-life" skills for collecting and evaluating data for patient care! Applicable to all clinical practice areas, including med-surg, pediatrics, critical care, maternity, and psychiatric nursing. Easy-to-use program walks users through the steps of constructing a concept map, including: Creating a data sheet with assessment/physical examination findings, treatments, pathophysiology, medications, and more Entering medical diagnoses Identifying appropriate nursing diagnoses and collaborative problems Providing supporting data for each patient problem Prioritizing key nursing diagnoses and collaborative problems Determining nursing interventions Building the concept map and adding arrows to show relationships Creating an evaluation summary Flexible programming allows users to customize their concept maps by moving boxes and adding multidirectional arrows that can point to more than one box to indicate relationships. Data sheet feature allows users to record key preliminary information such as assessment/physical examination data, pathophysiology, treatments, diagnostic tests/results, and much more. Interview data can be entered using a functional health patterns or review of systems approach. Data is color-coded by type (assessment, nursing diagnosis, intervention, etc.) throughout the program and in the finished concept map and to help users visually differentiate content and more clearly understand the complexities of patient care. The save and modify function allows users to return at a later date to make modifications to data and/or the concept map. Evaluation summary step allows users to enter evaluation data after seeing the patient in clinicals.

Written by the author of the best-selling texts on nursing diagnosis and care plans, *Understanding the Nursing Process* is the first book to tutor students on the nursing process, concept mapping, and care planning all in one text. It guides students systematically through each step, focusing sharply on fundamental need-to-know concepts and using easy-to-understand case studies and learning activities. To teach care planning, the text presents selected nursing diagnoses and collaborative problems that are appropriate for beginning students and grouped from simple to complex. An Instructor's Resource CD-ROM shows how to use the book in a clinical nursing course. Online Tutoring powered by Smarthinking—Free online tutoring, powered by Smarthinking, gives students access to expert nursing and allied health science educators whose mission, like yours, is to achieve success. Students can access live tutoring support, critiques of written work, and other valuable tools.

Introduction to Concept Mapping in Nursing provides the foundation for what a concept map is and how to create a map that applies theory to practice. This excellent resource addresses how students will think about applying nursing theory as it relates to concept mapping. This book is unique because it focuses on a broad application of concept mapping, and ties concept mapping closely to critical thinking skills. Furthermore, this book will prepare nursing students to learn how to map out care plans for patients as they talk with patients. Key Features & Benefits • Demonstrates how students can think through every aspect of care by using compare and contrast tactics, critical thinking skills, and experiences a nursing student may encounter • Includes thought-provoking questions to guide the reader through the text • Provides a section on nursing theory complete with exercises and rationales that include concept maps so that students can understand how theory is applied to practice • Written for students with various learning styles, so a broad range of learning activities are included to help readers understand the material

The new edition of *Nursing Care Planning Made Incredibly Easy* is the resource every student needs to master the art of care planning, including concept mapping. Starting with a review of the nursing process, this comprehensive resource provides the foundations needed to write practical, effective care plans for patients. It takes a step-by-step approach to the care planning process and builds the critical thinking skills needed to individualize care in the clinical setting. Special tips and information sections included throughout the book help students incorporate evidence-based standards and rationales into their nursing interventions.

"The purpose of this book is to teach nursing students how to use concept mapping theory to develop a concept care map, which is to be used in the direct care of patients and to communicate with members of the health-care team. Concept mapping is a diagrammatic teaching and learning strategy that allows students and faculty to visualize interrelationships between medical diagnoses, nursing diagnoses, assessment data, and treatments. Concept care maps result in a clear mental model of the patient health state and situation. Students must learn to share relevant information with the specific aim of creating a shared mental model with members of the health-care team to prevent errors that result in patient injuries and death"--Provided by publisher.
