An illustrated overview of the sustainability of natural resources and the social and environmental issues surrounding their distribution and demand.

Many map users have wondered why Portugal, sharing with Spain the Iberian Peninsula, ever became a separate nation. That question is answered with remarkable clarity by Dan Stanislawski. This book also presents an analysis of the factors that produce separate nations and offers a study of the evolution of national cultures generally, especially as they apply to Portugal.

Wind and water move sand and soil and carve rock. Enormous plates of land push against each other and create mountains. Find out how these incredible changes on Earth have happened over time.

Natural Resources in Afghanistan: Geographic and Geologic Perspectives on Centuries of Conflict details Afghanistan's physical geography — namely climate, soils, vegetation, water, hazards, and basic geologic background and terrain landforms — together with details of its rich natural resources, ethnic problems, and relevant past histories. The book couples these details with the challenges of environmental degradation and new environmental management and protection, all of which are considered finally in both pessimistic and optimistic modes. The reader comes away with a nuanced understanding of the issues that are likely to have great affect for this pivotal region of the world for decades to come. With an estimated \$1-3 trillion dollars of ore in the ground, and multiple cross-reinforcing cancellations of big Asian power machinations (China, India, Iran, Pakistan), Afghanistan has an opportunity to gain more economic independence. At the same time, however, historic forces of negativity also pull it back toward the chaos and uncertainty that has defined the country and constrained its economic progress for decades. Authored by the world's foremost expert on the geology and geomorphology of Afghanistan and its lucrative natural resources Aids in the understanding of the physical environment, natural hazards, climate-change situations, and natural resources in one of the most geographically diverse and dangerous terrains in the world Provides new concepts of resource-corridor development in a country with no indigenou expertise of its resources
