Emergency Medicine Lecture Notes provides all the necessary information, within one short volume, for a sound introduction to this core specialty area. Presented in a user-friendly format, combining readability with flowcharts and high-quality illustrations, this fourth edition has been thoroughly revised to reflect recent advances in the field of emergency medicine. For this new edition, Emergency Medicine Lecture Notes features: • Illustrations and flow charts in a two colour presentation throughout • More detail on imaging, diagnosis and management of a wide range of acute conditions • A brand new companion website at [www.lecturenoteseries.com/emergencymed](http://www.lecturenoteseries.com/emergencymed) featuring a selection of MCQs to test readers on common pitfalls in emergency medicine Not only is this book a great starting point to support initial teaching on the topic, but it is easy to dip in and out of for reference or revision at the end of a module, rotation or final exams. Whether you need to develop or refresh your knowledge of emergency medicine, Emergency Medicine Lecture Notes presents 'need to know' information for all those involved in treating those in an emergency setting.

Medicinal chemistry is both science and art. The science of medicinal chemistry offers marking one of its best hopes for improving the quality of life. The art of medicinal chemistry continues to challenge its practitioners with the need for both intuition and experience to discover new drugs. Hence sharing the experience of drug research is uniquely beneficial to the field of medicinal chemistry. Drug research requires interdisciplinary team-work at the interface between chemistry, biology and medicine. Therefore, the topic-related series Topics in Medicinal Chemistry covers all relevant aspects of drug research, e.g. pathobiochemistry of diseases, identification and validation of (emerging) drug targets, structural biology, drugability of targets, drug design approaches, chemogenomics, synthetic chemistry including combinatorial methods, bioorganic chemistry, natural compounds, high-throughput screening, pharmacological in vitro and in vivo investigations, drug-receptor interactions on the molecular level, structure-activity relationships, drug absorption, distribution, metabolism, elimination, toxicology and pharmacogenomics. In general, special volumes are edited by well known guest editors.

An agriscience textbook exploring such topics as environmental technology, plant sciences, integrated pest management, interior and exterior plantscape, animal sciences, food science, and agribusiness.

Principles of Neurobiology, Second Edition presents the major concepts of neuroscience with an emphasis on how we know what we know. The text is organized around a series of key experiments to illustrate how scientific progress is made and helps upper-level undergraduate and graduate students discover the relevant primary literature. Written by a single author in a clear and consistent writing style, each topic builds in complexity from electrophysiology to molecular genetics to systems level in a highly integrative approach. Students can fully engage with the content via thematically linked chapters and will be able to read the book in its entirety in a semester-long course. Principles of Neurobiology is accompanied by a rich package of online student and instructor resources including animations, figures in PowerPoint, and a Question Bank for adopting instructors.

The second edition of Giving a Lecture builds upon the reputation and success of the Key Guides for Effective Teaching in Higher Education series. It is an excellent resource for those new to teaching at the University and College level and for those who just want to reflect upon and refresh their lecturing practice. The best selling first edition has been fully revised, and this edition continues to cover all the basics on how to go about lecturing while maintaining its jargon-free and accessible style. New lecturers will find the second edition equips them with the essential tools and guidance for delivering a successful lecture, and explains exciting new developments along with the fundamentals of lecturing. Addressing a number of rapid developments that have occurred since its first publication in 2004, the second edition provides: A new chapter on podcasting and e-lecturing Much more on the effective use of PowerPoint Guidance on using interactive handsets to promote active learning and engagement Consideration of the role of Lectures in problem based learning (PBL) courses An expanded chapter that addresses current diversity/inclusivity issues A fresh look with new illustrations Updated 'Recommended Reading and Web-Resources' sections This handy guide uses a multi-disciplinary approach based on sound educational theory to provide clear guidance and engaging ideas on giving a memorable and motivational lecture. Readers will find its straightforward approach is both readable and very practical, and new University and College Teachers, Graduate Teaching Assistants, Part-time Tutors, Teaching Clinicians and Practitioners, together with those interested in educational and staff development, will find this book provides them with all the guidance they need to lecture with confidence and skill.
