Location. State College is situated at an elevation of approximately 1,200 feet (370 m) above sea level. According to the United States Census Bureau, the borough has a total area of 4.5 square miles (12 km 2), all of it land.It is surrounded by large tracts of farmland, and an expanse of Appalachian Mountain ranges and forests.

"The economics of American higher education are driven by one key factor—the availability of students willing to pay tuition—and many related factors that determine what schools they attend. By digging into the data, economist Nathan Grawe has created probability models for predicting college attendance. What he sees are alarming events on the horizon that every college and university needs to understand. Overall, he spots demographic patterns that are tilting the US population toward the Hispanic southwest. Moreover, since 2007, fertility rates have fallen by 12 percent. Higher education analysts recognize the destabilizing potential of these trends. However, existing work fails to adjust headcounts for college attendance probabilities and makes no systematic attempt to distinguish demand by institution type. This book analyzes demand forecasts by institution type and rank, disaggregating by demographic groups. Its findings often contradict the dominant narrative: while many schools face painful contractions, demand for elite schools is expected to grow by 15+ percent. Geographic and racial profiles will shift only slightly—and attendance by Asians, not Hispanics, will grow most. Grawe also use the model to consider possible changes in institutional recruitment strategies and government policies. These "what if" analyses show that even aggressive innovation is unlikely to overcome trends toward larger gaps across racial, family income, and parent education groups. Aimed at administrators and trustees with responsibility for decisions ranging from admissions to student support to tenure practices to facilities construction, this book offers data to inform decision-making—decisions that will determine institutional success in meeting demographic challenges"--

Community colleges enroll half of the nation ' s undergraduates. Yet only 40 percent of entrants complete an undergraduate degree in six years. Redesigning America ' s Community Colleges explains how two-year colleges can increase their students ' success rate quickly and at less cost, through a program of guided pathways to completion.

Stage 1.

Though colleges and universities are arguably paying more attention to diversity and inclusion than ever before, to what extent do their efforts result in more socially just campuses? Intersectionality and Higher Education examines how race, ethnicity, class, gender, sexuality, sexual orientation, age, disability, nationality, and other identities connect to produce intersected campus experiences. Contributors look at both the individual and institutional perspectives on issues like campus climate, race, class, and gender disparities, LGBTQ student experiences, undergraduate versus graduate students, faculty and staff from varying socioeconomic backgrounds, students with disabilities, undocumented students, and the intersections of two or more of these topics. Taken together, this volume presents an evidence-backed vision of how the twenty-first century higher education landscape should evolve in order to meaningfully support all participants, reduce marginalization, and reach for equity and equality.

The Second Edition of Johnny Salda ñ a's international bestseller provides an in-depth guide to the multiple approaches available for coding qualitative data. Fully up to date, it includes new chapters, more coding techniques and an additional glossary. Clear, practical and authoritative, the book: -describes how coding initiates qualitative data analysis -demonstrates the writing of analytic memos -discusses available analytic software -suggests how best to use The Coding Manual for Qualitative Researchers for particular studies. In total, 32 coding methods are profiled that can be applied to a range of research genres from grounded theory to phenomenology to narrative inquiry. For each approach, Salda ñ a discusses the method's origins, a description of the method, practical applications, and a clearly illustrated example with analytic follow-up. A unique and invaluable reference for students, teachers, and practitioners of qualitative inquiry, this book is essential reading across the social sciences.

Breaking Barriers shows how to redesign high schools so that all students can move on to college and successful careers. In a negation of the American Dream, a childÕs zip code is currently a far better predictor of success than hard work, intelligence, or resilience. This book tells the story of a school model that focuses on equity and works to prove that all young people can achieve academic excellence given the right support. P-TECH (Pathways in Technology Early College High School) combines public high schools and community colleges in partnership with employers, providing both opportunity and support for all students. This innovative and effective approach eliminates barriers to replication by engaging all stakeholders. The first P-TECH, which opened in a low-income Brooklyn neighborhood, is now a model for school reform. Praised by President Obama and heads of nations, its story is told through the voices of students who have shattered the myths about which students can succeed. " Breaking Barriers is a compelling read. It shows that a clear pathway from school, to college, to career goes beyond an aspiration—it ' s achievable, and for all students. The global success of P-Tech schools is something education, government, and business leaders need to learn about and get behind. " —Arne Duncan, former United States Secretary of Education " Breaking Barriers is a must-read. The P-Tech story shows that quality schools leading to not just a high school diploma but college completion and career success are critical to our future. This is the kind of opportunity and support that must be provided to all students, regardless of income or race. " —Darren Walker, president, Ford Foundation

In the 1950s, East Central Florida underwent a vast transformation with the creation of the American space program. The sleepy fishing communities stretching from Titusville to Melbourne became home to an army of engineers, rocket scientists, and technicians who would soon take Florida and the nation into the missile age. With no opportunities for advanced study nearby, a handful of determined men and women launched Brevard Engineering College in 1958. In 1966, Florida's secretary of state approved the college's petition to change its name to Florida Institute of Technology. In its short history, Florida Tech has overcome formidable hurdles and succeeded in winning a place in the top ranks of scientific and technological universities. A college on the rise, Florida Tech has not only a bright future, but a rich and colorful history that has been captured in striking photographs. The exciting story of "Countdown College"-from the lift-off of Bumper 8 in 1950, which launched the space program in Florida, to the most recent high-tech additions to campus facilities-is the subject of this captivating new pictorial history.
