The Great Crash, 1929 is a book written by John Kenneth Galbraith and published in 1955. It is an economic history of the lead-up to the Wall Street Crash of 1929. The book argues that the 1929 stock market crash was precipitated by rampant speculation in the stock market, that the common denominator of all speculative episodes is the belief of participants that they can become rich without work and that the tendency towards recurrent speculative orgy serves no useful purpose, but rather is deep

nation's oracles and the wondrous antics of the financial community." Now, with the stock market riding historic highs, the celebrated economist returns with new insights on the legacy of our past and the consequences of blind optimism and power plays within the financial community.

This is the story of the financial cataclysm that started with the Wall Street stock market crash of 1929, and set in motion a series of economic, political and social events that affected many millions of people in America, Britain, Europe and Australia. The Crash rolled across the world like a tidal wave, toppling governments, spreading the wave of dictatorships in Italy and Germany, infecting entire industries and plunging millions into unemployment and poverty. By the time it began to lift in 1935, the lives of people in scores of countries had changed forever. Selwyn Parker's book also poses the question: could it happen again?

Over six terrifying, desperate days in October 1929, the fabulous fortune that Americans had built in stocks plunged with a fervor never seen before. At first, the drop seemed like a mistake, a mere glitch in the system. But as the decline gathered steam, so did the destruction. Over twenty-five billion dollars in individual wealth was lost, vanished, gone. People watched their dreams fade before their very eyes. Investing in the stock market would never be the same. Here, Wall Street Journal bureau chief Karen Blumenthal chronicles the six-day period that brought the country to its knees, from fascinating tales of key stock-market players, like Michael J. Meehan, an immigrant who started his career hustling cigars outside theaters and helped convince thousands to gamble their hard-earned money as never before, to riveting accounts of the power struggles between Wall Street and Washington, to poignant stories from those who lost their savings—and more—to the allure of stocks and the power of greed. For young readers living in an era of stock-market fascination, this engrossing account explains stock-market fundamentals while bringing to life the darkest days of the mammoth crash of 1929.

The Great Crash of 1929 profoundly disrupted the United States' confident march toward becoming the world's superpower. The breakneck growth of 1920s America—with its boom in automobiles, electricity, credit lines, radio, and movies—certainly presaged a serious recession by the decade's end, but not a depression. The totality of the collapse shocked the nation, and its duration scarred generations to come. In this lucid and fast-paced account of the cataclysm, award-winning writer Charles R. Morris pulls together the intricate threads of policy, ideology, international hatreds, and sheer individual cantankerousness that finally pushed the world economy over the brink and into a depression. While Morris anchors his narrative in the United States, he also fully investigates the poisonous political atmosphere of postwar Europe to reveal how treacherous the environment of the global economy was. It took heroic financial mismanagement, a glut-induced global collapse in agricultural prices, and a self-inflicted crash in world trade to cause the Great Depression. Deeply researched and vividly told, *A Rabble of Dead Money* anatomizes history's greatest economic catastrophe—while noting the uncanny echoes for the present.

There were many changes in the USA in the post WW1 Period and the 1920s. A housing boom, new theories on finance and stock pricing models, high inflation rates, increases in the money supply, and a technology boom all took place to create a very exciting and dangerous period for investors. It was the most infamous 'boom and bust' episode in modern history and one which is again the subject of heated debate as the field of economics clashes over the presence of asset bubbles and their implications for economic policy. With new data and over 100 years of stock market returns, the actual models used by investors, together with new findings from modern research, Ali Kabiri offers the reader the chance to investigate what drove stocks so high and then caused them to crash. He thoroughly re-examines all the unanswered questions on 1929 and, using new data sets, he allows the reader to understand the changes which led to the 1920s stock market boom and the 1929 crash and answers the key question of whether 1929 was a bubble or not, and which part of the bubble, if present, could have been anticipated. The Great Crash of 1929 is an ideal resource for those interested in financial history, historical finance, behavioural economics, financial markets and the history of economic thought.

During the Great Depression of 1929, the stock market crashed. Companies closed, people lost their jobs and life just got a lot more difficult. But what is the stock market and why does it play such a big role in the economy? Know the theories and get some concrete examples in the pages of this history book for fifth graders.
